GATT Analysis

Kristy Buzard

4/24/2021

Contents

Next steps

To do

1. Create centralized documentation
    - Include history from Unsolved problems in coding.docx (OneDrive)
2. Resolve "complicated" paragraphs, including 4 that still have no tariffs

- *Matt is looking through last three rounds*

3. **Kennedy, Tokyo, Uruguay**
4. Choose other countries
   - Refine *Members.in.GATT.xlsx*
   - Focus on Benelux, Canada, Chile, France, India, U.K., Dominican Republic, Haiti, Italy, Germany, Peru, Japan
     - Matt is adding # of pages for each schedule
5. **Make list of accuracy checks, run them, fix typos in data**
   - Check for tariffs going up from round to round
6. **Figure out how to integrate "free" list**
   - For which rounds do we have the free list typed up? Just Torquay Free List.xlsx on G: drive
7. Condense data cleaning code
8. Read and summarize "Tariff negotiations and renegotiations under the GATT and the WTO" (hard copy at SU library)
   - Victor will ask Matt to see if he can get the book from the library, let me know if not
9. Read through Victor's notes for ideas
   - What is status of 'interesting paragraphs.pdf' and 'Splitting paragraphs in Dillon.pdf"?
10. Go back to questions in *Plan.docx* when last three rounds are finished
11. Identify lines that switch between specific and ad valorem
12. Look for gradualism in graphs
13. 10 lines in Dillon that have more than 2 years
14. Think about how variation in units affects specific summary stats
    - Look into trade-weighting
15. TOT analysis
16. Find implementation years (maybe get answer from Doug Irwin)
17. Get working draft together ASAP
18. Add Schedule A tariff data from 1946 (last available before Geneva 1947)
    - Are current Column 2 tariffs Smoot Hawley or the 1946 tariffs?

Done

1. ~~Make Github version for CEA abstract~~
2. ~~Contact Tricia Mueller (USITC) and Roy Santana (WTO) [Bob Staiger's suggestions] [Feb 24]~~
3. ~~Figure out how to source multiple code files~~
4. ~~Program stats into abstract~~
5. ~~Resolve copyright issues, then (hopefully) post the correct schedules on Github~~
6. ~~Determine that TSUS tariffs were always at 5 digit, so we can just use the 5-digit tariff for all of the 7-digit subcategories~~
7. ~~Read and summarize "Two Centuries of Tariffs" (USITC, in G:drive folder)~~
8. ~~Consolidate various notes in Github / One Drive / G drive~~

	Summary Statistics of Specific Tariffs by Round						
	Min	1st Quartile	Mean	Median	3rd Quartile	Max	N
Smoot Hawley	0	2.00	47.90	6.00	30.0	3000	1527
Geneva	0	1.25	32.95	5.00	25.0	2000	1530
Annecy	0	1.14	31.97	4.08	25.0	2000	1526
Torquay	0	1.00	27.54	3.50	20.0	2000	1524

GenevaB	1.88	11.0	21.67	17.75	27.50	118	1946
GenevaC	1.88	10.5	21.39	17.50	27.50	90	1947
DillonA	1.00	10.5	19.52	15.50	25.00	90	1943
DillonB	0.50	10.0	18.95	15.00	25.00	90	1943

Importing and cleaning the data

Importing and cleaning the data is done in "data_cleaning.rmd". It needs to be reprogrammed before being added here because it is nearly 1000 lines long. The chunk below calls that program to make the processed data available to the rest of the commands in this document.

Basic summary statistics

Specific tariffs

We see below that the specific tariffs come down by roughly half from Smoot Hawley.

- About half came in Geneva, the rest through Dillon. That is, Geneva did half the work and the following four rounds did the other half

But this could be deceptive since different lines use different units

- Victor has standardized everything to be in cents (per U.S. dollar) in UnitsKey.rmd

```
source('UnitsKey.r')
```

Ad valorem tariffs

Strikingly, the reductions look to be of the same magnitude for Ad valorem, again with Geneva doing about half the work.

- In Dillon, 1053 rows out of 2996 are missing, so there are 1943 ad valorem tariffs. So 64.85% of lines have *ad valorem* tariffs.

Smoot Hawley Schedule Titles		
Schedule	# Lines	Title
1	397	Chemicals, Oil, and Paints
2	243	Earths, Earthenware, and Glassware
3	662	Metals and Manufactures of
4	52	Wood and Manufactures of
5	17	Sugar, Molasses, and Manufactures of
6	12	Tobacco and Manufactures of
7	461	Agricultural Products and Provisions
8	33	Spirits, Wines, and other Beverages
9	116	Cotton Manufactures
10	84	Flax, Hemp, Jute, and Manufactures of
11	152	Wool and Manufactures of
12	36	Silk Manufactures
13	53	Manufactures of Rayon or Other Synthetic Textile
14	146	Papers and Books
15	532	Sundries

How did liberalization vary across Schedules?

First, descriptions of each schedule:

Summary stats for specific tariffs

The table below is exactly the same as the one above EXCEPT it drops the 218 lines that are impacted by the "tax interval" issue

Notes:

- 8 (spirits) largest, and consistent across rounds (1 ad valorem only)
- 5 (sugar) unambiguously smallest cuts, had some of the highest ad-valorem
- Reduction in median vs. mean: split exactly half and half as to which reduction was smaller
- Schedule 12 must be all ad valorem

Mean of specific tariffs by schedule and round

Removing tax interval lines

Summary stats for ad valorem tariffs

For several paragraphs, the maximum tariff for Dillon B changes when we get rid of the tax interval lines (2,9,11). Still I'm not going to print the tables with the maxes in them for now.

Mean of ad valorem tariffs by schedule and round

Removing tax interval lines

What was the total reduction in negotiated tariffs under the GATT in each round?

Mean and median of specific tariffs in each round

Which lines were only ad valorem, only specific, or both?

Mixed

Next we need to know about the lines that have both ad valorem and specific (or take them out from above); at least quantify them to start

How many lines have both ad valorem and specific in each round?

- Smoot Hawley: 498
- Geneva 1947: 485
- Annecy: 484
- Torquay: 480
- Geneva56A: 480
- Geneva56B: 480
- Geneva56C: 478
- DillonA: 472
- DillonB: 472

Victor's intuition on mixed lines

I believe many of the changes from specific tax to ad valorem or otherwise is because of the tax intervals. You could search the keywords "tax boundaries" and "tax interval(s)" in Extra column of every round to locate them.

Proportions of specific, ad valorem, mixed

A few lines in each round have neither specific nor ad valorem. Matt is working on fixing this

```
[1] "Smoot-Hawley"
```

Sched	Product	Paragraph	id
3	1	368.c_18	1078
8	1	810	1877
14	1	1408	2411
15	17	1532.a	2831

```
[1] "Dillon B"
```

Sched	Product	Paragraph	id
3	1	368.c_18	1078
8	1	810	1877
14	1	1408	2411
15	17	1532.a	2831

Tariff Increases

Here we are looking round by round for lines that had an increase in either the ad valorem or specific tariff (or both). Later we will look at lines that switch from one type of tariff to the other.

##                 0.21              17.0                 1                18        NA
```

No change from Smoot Hawley to Dillon B

```
lines <- data_set %>%
        mutate(av_pc =((Ad_Valorem_SH - Ad_Valorem_Dillon_B)/Ad_Valorem_SH)*100,sp_pc
        =((Specific_SH - Specific_Dillon_B)/Specific_SH)*100)

lines2 <- subset(lines,is.na(sp_pc) | sp_pc==0) %>% subset(is.na(av_pc) | av_pc==0)
```

The code above produces 371 lines that are the same in Smoot Hawley and Dillon B (i.e. that don't change at all through these five rounds of negotiations–we assume. We still need a check for rates going up.)

Summarizing the impact of tax intervals

Implementation dates

Geneva 1: January 1, 1948 (Irwin 2017, p. 486)

TOT analysis

We'll need measure of importer market power

1. inverse foreign supply elasticities are at HS6 level, are much more recent
    - Ross will look into the feasibility (data and code) of creating these measures for the 1930s/40s
    - Would we want Broda, Limao, Weinstein version (requires trade flows only) or Anson Soderbery's heterogeneous version?
    - Ross recalls he's seen a joint project between Anson Soderbery and Doug Irwin about the 1930s
2. product differentiaton index (Rauch), also newer, but maybe less sensitive to changes over time
3. market share might be credible enough, and easier to get

We'll need to think about whether it's credible to try the identification strategy Ross has used in his work
